Note: n.d. = not detected

mg/kg = ppm

1% = 10000 mg/kg

Method Detection Limit = 20 mg/kg

* = Exceeds the limit

= The test result is over the recommended action limit (i.e. 80% of the regulatory limit). As the test result is based on the composite sample and falls into an uncertain range, where "Pass" or "Fail" cannot be truly defined, an "Interim-Fail" is given since the composite sample may possibly fail according to the regulatory limit. It is highly recommended to conduct individual tests for the exact content of Pb in each individual component.

Δ = Test done on dried paint sample

The result is calculated using the minimum sample weight

Permissible Limit: 90 mg/kg
